

# Project Description

---

## Project Proposal and Submission Guidelines

You are required to **design and develop a complete website** for a **new business proposal**. This project will help you apply your skills in **HTML**, **CSS**, and **JavaScript** to create an attractive, functional, and interactive website.

Your project will be completed in **three stages**:

1. **Project Proposal Submission**
2. **Final Project Submission**
3. **Project Presentation**

### Submission Instructions

- Only one member of each group should submit the Project Proposal and the Completed Project on Google Classroom.

### Deadlines

- Project Proposal Submission: **19<sup>th</sup> November 2025, by 4:30 PM**
- Final Project Submission: **30<sup>th</sup> November 2025**
- Viva (Tentative Dates): **1<sup>st</sup> to 5<sup>th</sup> December 2025**

### Stage 1:

#### Project Proposal Preparation

- Each group must prepare a formal Project Proposal.
- A maximum of three (3) members is allowed per group. (Cross-section groups are not permitted.)
- The proposal must include:
  - Group members' names and roll numbers
  - Project idea
  - Key features
  - A concise description of the project
  - Create a logo and a promotional poster for your website

### Stage 2

#### Website Development Activity

Develop an attractive and functional website using HTML, CSS, and JavaScript.

General Guidelines:

- You are not allowed to use pre-designed templates.

- The website should be based on any business idea of your choice.
- Apply creative design and functionality to make your website visually appealing and interactive.

### **Website – Mandatory Sections:**

1. Home Page
  - Provide a main introduction to your website, including relevant images or videos.
2. Website Logo
  - Display the logo designed in Task 1 on every page.
3. About Page
  - Include detailed information about your website or business, such as vision and mission statements.
4. Products Page
  - Present detailed information about the products related to your business.
5. Services Page
  - Describe the services your business offers to customers.
6. Blogs / Social Links
  - Add links to Facebook, Instagram, or other social media pages relevant to your business.
7. Contact Page
  - Include your company's address, contact details, and an embedded Google Map showing your location.
8. Feedback Page
  - Create a feedback form to collect user input for improving your business.
  - The form should redirect users to a confirmation or linked page upon submission.
9. Additional Sections
  - Add Header and Footer elements and any other relevant pages as needed.
  - Ensure that each tab or link navigates correctly to a new or detailed page.

### **Website – Technical Requirements:**

1. Use CSS to enhance the styling and overall visual appearance of your website.
2. Include a proper Title Tag for the website.
3. Place the graphic title or logo (from Task 1) at the top of every page.
4. Assign a page title within the <head> section of each HTML file.
5. Include structured content using tags such as <p>, <h1>–<h6>, <br>, and <img>.
6. Ensure internal hyperlinks for smooth navigation across all web pages.
7. Add a navigation bar or dropdown menu for user-friendly movement between pages.
8. Provide at least one external hyperlink (absolute URL) that opens in a new browser tab or window.

9. Include at least one numbered or bulleted list on your website.
10. Create a 5×5 table (with column and row spans) and format it using CSS.
11. The feedback form must include: an HTML form titled “Customer Feedback Form”. The form should include the following fields and elements:
  - Name (text input)
  - Email (text input)
  - Rate Our Service (radio buttons: Excellent / Good / Average / Poor)
  - Services Used (checkboxes: Product Purchase / Delivery / Support / Other)
  - Feedback Type (dropdown: Suggestion / Complaint / Appreciation)
  - Comments (text area for user message)
  - Submit and Reset buttons
  - Use labels for all fields.
  - Group related elements using <fieldset> and <legend>.
  - Style the form using CSS to make it neat and readable (optional).
12. You may add additional design elements such as CSS cursor effects, animations, or transitions to enhance interactivity.

### Stage 3:

### Project Presentation

Prepare a well-structured and visually engaging presentation summarizing your project work.

The presentation should include the following sections:

- Introduction – Provide an overview of your project and its purpose.
- Project Description – Explain the key features, functionality, and technologies used.
- Website Screenshots – Include relevant visuals demonstrating the layout and major components of your website.

 **Good luck, and do your best!**
